Quick Start for Simple Serial Interface to NDI Tracking Systems

1. Turn on Linux machine and log in.
2. Open a terminal, issue the following command
   ```
   > cd ~/github/tracker-serial-interface
   ```

Stream mode: capture frames (all tools) at full speed	`> ./track_server`
Manual mode: capture one frame (all tools) when Enter is pressed	`> ./track_server -m`
Listen mode: monitor serial port for capture request packets	`> ./track_server -l`
